Reasons for Allowance

The amendment dated 04/20/2010 has been entered.

1. The following is an examiner's statement of reasons for allowance:

Independent claims 1, 5-7 and 13 disclose a motorcycle simulation system that includes a novel device for providing a dummy engine vibration to the operator. Yamasaki et al. (US Patent No. 5,547,382), the closest prior art of record, discloses a dummy engine vibration mechanism in a steering handle that includes an eccentrically mounted weight, but does not teach a vibrator formed with left and right flat sides and curved top and bottom sides, a taper surface portion formatted at an inner circumferential surface of a steering handle pipe constituting the steering handle mechanism, said taper surface portion gradually decreasing in diameter from the side of an end portion of said steering handle pipe, as well as the bracket mechanism with recesses for engagement with the steering handle. Yamasaki (JP 10123930 A) also discloses a motorcycle simulator with a vibrator placed in the handlebars to simulate braking feedback, but does not disclose or suggest the vibrator mechanism of claims 1, 5-7 and 13. Loper (US 5,203,563) discloses a vibrator inside a video game steering handle/mechanism that includes a bracket to which the vibrator is mounted, but does not disclose the taper surface portion that decreases in diameter from one side of the handle to another, and the bracket includes a pair of brackets each with a recess on an inner surface to form a recess with flat inner faces for engaging the flat sides of the vibrator.

Independent claim 11 discloses a riding simulation system that includes a novel click generator mechanism to the click felt by the rider of a real motorcycle. The

Art Unit: 3715

combination of McDowell (US Patent No. 6,083,106), Yamasaki et al. (US Patent No. 5,547,382) and McClellion (US Patent No. 7,156,026 B2) teaches the step mechanism, connection shaft and frame portion of the simulated motorcycle, and Yamasaki discloses a simulated gear change, but the combination does not disclose the click generator comprises a support member disposed between a cover member and a support plate, and a ball member disposed in a hole formed in a shaft projecting from a support member, the cover member having a hole portion formed therein in which the ball member is engaged when said gear change pedal is in a center position. Ito (US Patent No. 4,589,532) discloses a speed selector for a transmission that includes a mechanism with a ball member engaged in a hole formed in a shaft, but does not disclose the cover member has a hole portion in which the ball member is engaged when the gear change pedal is in a center position, and also does not teach or suggest utilizing such a mechanism for generating a simulated gear change feeling.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
